## III. Results

The regression analysis revealed that for every additional 1,000 pounds of weight, the car's miles per gallon decreases by an average of −5.34 units (p = 0). This model explains 0.75% of the variance in fuel efficiency, indicating a strong relationship between car weight and mpg. The model's F-statistic is 91.38, with a p-value of 0, demonstrating the statistical significance of the regression model.

The following portion of code [geom_smooth()using formula = 'y ~ x'] still shows in the rendered text even though I have set#| echo: FALSE`.

```
`geom_smooth()` using formula = 'y ~ x'
```
